Software Description

# CASSOFT SOFTWARE DESCRIPTION

## **Background:**

In our quest as developers to contribute to society, a team of Ashesi students embarked on a journey to underdeveloped communities in Ghana. We found ourselves in Ankonam - Oyarifa where we got to experience first-hand the plight of school administrators of some private schools in the area. Typical of them was Christ Ambassadors School. Our mission was to provide a technological solution to their problem.

- Because of the financial challenges parents pay school fees by day or when it becomes available. This made tracking payments and managing finances an exhausting tasks.
- There were always quarrels by parents who claimed to have paid and due to the schools inability to show concrete proof scuffles were a common occurrence.
- Finally at the end of the term making a financial report of spending total school fees collected was almost impossible.

## **Scope and Purpose:**

CASSOFT is a Java based application that allows school admins to manage fee payment in an efficient way. It makes the process of financial management a simple clicking process. CASSOFT was built mainly to help schools in rural areas in Ghana to ease the burden of resource management.

## **Methods and Instrumentation:**

Technologies used are Java, JavaFX, JDBC and mySql. User Interface was custom designed with adobe illustrator and incorporated into JFrame.

## **Limitations, Questions and Issues:**

CASSOFT was built with JDBC employing mySql and therefore computers that run CASSOFT must have mySql server running to be able to allow persistence from a database.

An sql file containing cassoft must be run on the parent pc in order to create the database.

# Build Instructions

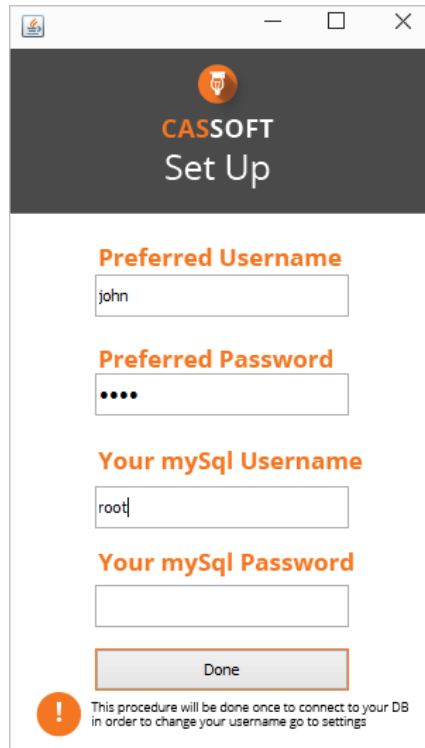

The Project files contains:

A JAR file that allows the program to be run as a standalone application.

- Project files
- A cassoft.sql file with dump
- A dist folder for a standalone jar file
- Snapshots
- Documentation
- An CASSOFT SOFTWARE DESCRIPTION pdf file

**For Purposes of Running Cassoft mySql server needs to be turned on throughout.**

1. Turn on your mySql server and run the cassoft.sql file. This will create a database called cassoft with some information dump.
2. Run the **cassoft-version2.jar** file if you want to run as a standalone application. Or open the project in NetBeans and run from NetBeans. After running the cassoft-version2.jar for the first time, a window like this will appear.

**CASSOFT Set Up**

**Preferred Username**

**Preferred Password**

**Your mySql Username**

**Your mySql Password**

**Done**

 This procedure will be done once to connect to your DB in order to change your username go to settings

3. This window allows you to save a preferred username and password which you will use to login into the application normally, also you are **required** to add your MySQL username and password. This allows us to connect to your database for persistence. If your MySQL does not have a password just leave it blank like in the example. This is a onetime process.
4. This process creates a file called **credentials.txt** this file is not to be tampered with as it can prevent login. In order to repeat the Set-Up process delete the **credentials.txt** file
5. You can now login with the username and password you specified initially, **not** the MySQL password and username. If you forget your username and password use

username: **john** password: **cassoft**

## The Application

Name	Class	School Fees	Amount Paid	Amount Owed
Ntuabunauzor Amaka	JHS 3	100.0	0.0	100.0
Wiggins Jeremy	JHS 3	100.0	0.0	100.0
Punch Yebisi Sheamus	Class 3	100.0	0.0	100.0
Jones Sylvester	Class 3	100.0	0.0	100.0
Campell Veronica	JHS 1	100.0	0.0	100.0
Gyepi-Adee Rosina	Class 3	100.0	0.0	100.0
Gyepi-Adee Isaac	Class 6	100.0	0.0	100.0
Williams Vanessa	Class 4	100.0	0.0	100.0

The main functioning features of this application are:

- Selecting a student from the table, which appears in the side bar
- Viewing the payment history of the Student
- Deleting a student
- Making a Transaction
- Switching between Full screen and Maximized
- Settings for administrator
- Login Screen
- A search bar with auto suggest
